Mission

- To create and market technologies that empower parents to keep their children thriving and safe in the digital age.

Overview

- TeenSafe has brought to market a comprehensive monitoring tool that allows parents to monitor their child's smartphone activity including:

SMS/iMessages as well as deleted texts

Call Logs

Device **location** including location history

Web browsing history and contacts

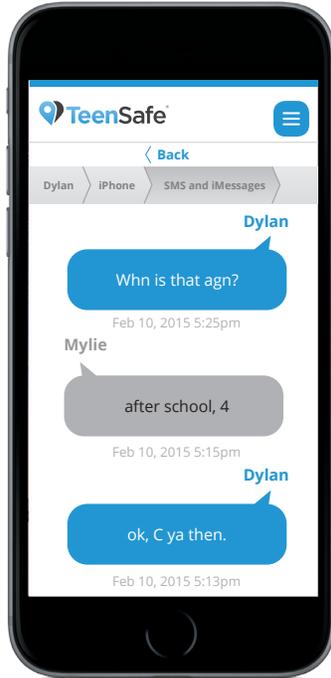

Instagram posts, messages & Followers

Whatsapp & Kik messenger & More

- Since our launch, TeenSafe has become the #1 parental monitoring service.
- TeenSafe has also established itself as a vibrant, growing and trusted consumer brand.
- TeenSafe is quickly developing new features and products.

Unmatched Technology

- TeenSafe's parental monitoring technology maintains several advantages over competing services:

- TeenSafe does not require an iPhone to be "jailbroken" nor an Android device to be "rooted" for use.
- Physical access to the phone is not necessary for setup. TeenSafe is not visible on an iPhone and does not violate the phone's warranty.

Experts

"There is no such thing as privacy with children. Parents need to know what's going on with those phones. They need to have conversations with kids, to know what apps kids are using, and to whom they are talking to."

—Detective Rich Wistocki
Chicago Western Suburban Police
Department Internet
Crimes Unit.
